

Khomas 2011

Census Regional Profile

REPUBLIC OF NAMIBIA

2011 Population and Housing Census

Khomas Region

Basic Analysis with Highlights

Foreword (Face up)

The first Population and Housing Census in an independent Namibia was conducted in 1991. Since then, a Census has been undertaken every ten years, and the 2011 Population and Housing Census marks Namibia's third census since independence in 1990. The Census is demonstrative of the Namibia Statistics Agency's (NSA) commitment to providing relevant and quality statistics to support decision making, policy formulation and monitoring of development programmes.

This regional profile presents the result of the 2011 Namibia Population and Housing Census for the Khomas Region. The report provides a wide range of indicators on population characteristics, household and housing conditions and households enumerated in the region between 28 August and 15 September 2011. The report further provides detailed information on age and sex composition, marital status, education, literacy, economic activity, orphan-hood, fertility and disability. In addition, household size, housing amenities, ownership and the quality of housing are also presented in this report. All these indicators are provided at regional, urban/rural and constituency level. It should be noted that internal migration was not possible to calculate at constituency level. However it was provided at regional level in the 2011 main census report launched on 27 March 2013, as well as in the Population Atlas released in June 2013.

This regional profile is the fourth in a series of reports to be released based on the 2011 census data. The first report - released in April 2012 - disseminated provisional results on the distribution of the population. The second report was the census main report, which presented more detailed results at national level; and the third report was the Population Atlas, which depicts the distribution of the country's population on maps by regions and constituencies.

We thank the Government of the Republic of Namibia for contributing significantly to the implementation of the 2011 census, as well as our development partners who provided technical or financial support. We are grateful to everyone who contributed to ensuring that the 2011 census was a success. In particular, we thank UNFPA, the Government of the United States of America through USAID and Statistics South Africa for their technical support to ensure the timely completion of census activities. We also thank the census inter-agency technical committee, line ministries, private institutions, the governor of the region and regional offices, field staff and the general public for their support, which was pivotal to the success of the 2011 Population & Housing Census.

We are hopeful that the users of this report will find its contents useful for their decision making and planning purposes, including business investments. Our commitment is to ensure that all statistics required by our users are readily available.

DR. JOHN STEYTLER
STATISTICIAN GENERAL
NAMIBIA STATISTICS AGENCY

Contents (Face up)

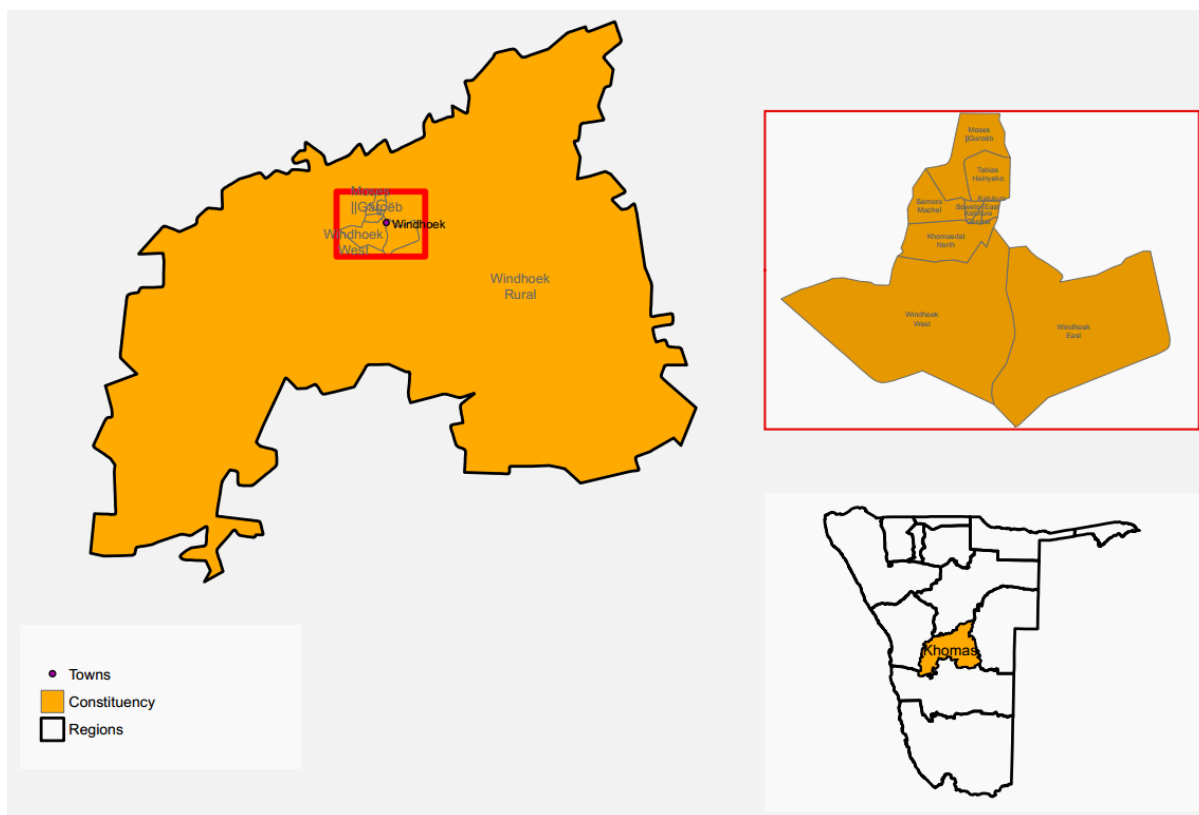

List of Acronyms	i
Key Indicators by Region	iii
CHAPTER 1: INTRODUCTION	1
1.1 Background	1
1.2 The 2011 Population and Housing Census	1
1.3 Organization of the Report	1
CHAPTER 2: POPULATION SIZE, STRUCTURE AND COMPOSITION	3
2.1 Population Size and Density	3
2.2 Population Structure and Composition	5
CHAPTER 3: POPULATION CHARACTERISTICS	11
3.1 Marital Status	11
3.2 Citizenship	12
3.3 Namibian Birth Registration	12
CHAPTER 4: POPULATION TRENDS	14
4.1 Population Growth	14
4.2 Fertility	14
4.3 Deaths in the Household	16
CHAPTER 5: SOCIO-ECONOMIC CHARACTERISTICS OF THE POPULATION	18
5.1 Information and Communication Technology	18
5.2 Early Childhood Development	19
5.3 Education and Literacy	20
5.4 Disability	25
5.5 Orphan-hood	29
5.6 Economic Activity	29
5.7 Economically Inactive Population	35

CHAPTER 6: HOUSEHOLD CHARACTERISTICS	36
6.1 Household Size	36
6.2 Household Composition	37
6.3 Household Income	38
6.4 Household Assets	39
6.5 Language	40
6.6 Agricultural Activity	40
CHAPTER 7: HOUSING CHARACTERISTICS	42
7.1 Type of Housing	42
7.2 Type of Tenure	42
7.3 Average Number of People Per Room	43
7.4 Type of Materials Used for Construction	44
7.5 Source of Energy	46
7.6 Water Supply and Sanitation	48
7.7 Garbage and Waste Disposal	50
Annex: Glossary of Census Terms	51
Examples of Enumeration Area Map	54
Detailed Census Tables	55

LIST OF ACRONYMS

CBS	Central Bureau of Statistics
CBR	Crude Birth Rate
CDR	Crude Death Rate
EA	Enumeration Area
ECD	Early Childhood Development
ICT	Information Communication Technology
MDGs	Millennium Development Goals
NDPs	National Development Plans
NSA	Namibia Statistics Agency
UNFPA	United Nations Population Fund
USAID	United States Agency for International Development

CHAPTER 1: INTRODUCTION

The Khomas region is one of the thirteen administrative regions of Namibia, and is home to the capital city, Windhoek. The region has superior transportation infrastructure, and well-developed economic, financial, and trade sectors. Khomas Region is one of only three regions to have neither a shoreline nor a foreign border. It borders the following regions: Erongo in the west, Otjozondjupa in the north, Omaheke in the east and Hardap in the south.

The region has ten constituencies: Tobias Hainyeko; Katutura Central; Katutura East; Khomasdal North; Soweto; Samora Machel; Windhoek East; Windhoek Rural; Windhoek West and Moses //Garoeb.

1.1 The 2011 Population and Housing Census

The 2011 Namibia Population and Housing Census results show that Khomas had a population of 342,141 people of which 172,469 were women and 169,672 were men. Between 2001 and 2011, the population grew at an average annual rate of 3.1 percent. The majority of the population, about 95 percent, lived in urban areas. There were 89,438 households, with an average size of 3.7 persons per household.

This regional report provides more detailed findings in terms of the socio-economic, demographic, households and housing characteristics of the Khomas region as collected during the 2011 census. Furthermore, comparisons were made between the various census years as well as urban/rural areas and constituencies within the region.

1.3 Organization of the report

This report is comprised of seven main chapters and an Annex. Chapter 1 provides the background of the region, Chapter 2 presents information on the population size, structure and composition as well as sex ratio and population density. Chapter 3 provides information on marital status, citizenship and registration of births, while information on population trends, with a focus on population growth, fertility and household deaths is given in Chapter 4. Chapter 5 addresses socio-economic characteristics of the population and mainly covers Information and Communication Technology (ICT), literacy, education, disability, orphanhood and economic activity. Chapter 6 provides information on household characteristics including household size, household composition, main sources of income for the household, asset ownership, main language spoken at household level and agricultural activity. Chapter 7 presents information on housing characteristics, focusing on the types of housing unit, tenure status, construction materials, water supply and sanitation as well as sources of energy for the household.

Please note that:

1. Chapter two (2) presents information for all persons including those who were overnight travellers, or who were in a hotel or in prison during the Census period. However, chapters 3 - 7 present information obtained only from all persons who were enumerated in private and institutional households.

2. Imputation using the hot-deck method was applied for 'Not stated' and 'Don't know' responses to the age and sex of each person.
3. There are three Annexes: a Glossary of census terms, an Enumeration Area map and detailed tables

CHAPTER 2: POPULATION STRUCTURE, COMPOSITION AND DENSITY (Face up)

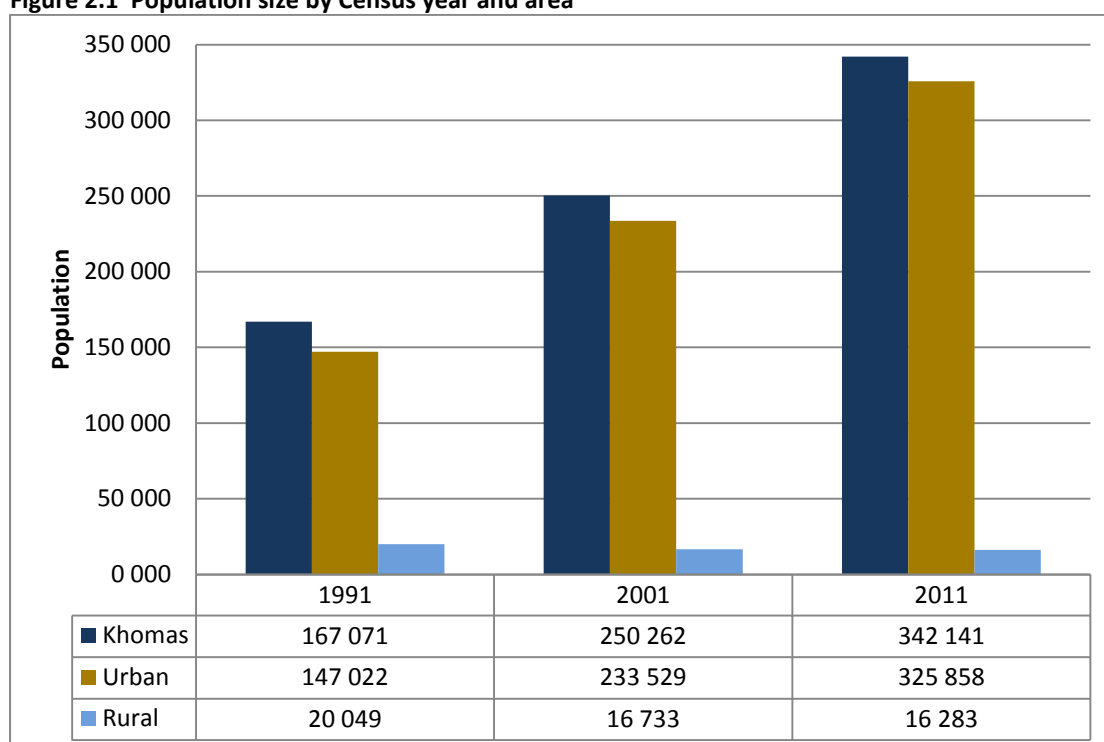

This chapter provides information on the population size, structure, composition and density of the Khomas Region. It also presents analyses of population trends between the 1991, 2001 and 2011 Census years.

2.1 Population size and density

Total Regional Population of Khomas Region was 342 141

Figure 2.1 provides a comparison of the population size by census year. The results show that the total population of Khomas increased from 167 071 in 1991 to 250 262 in 2001, and to 342 141 people in 2011. This trend is observed in the urban population, which has been increasing consistently over the Census years, while the rural population has declined over the years.

Figure 2.1 Population size by Census year and area

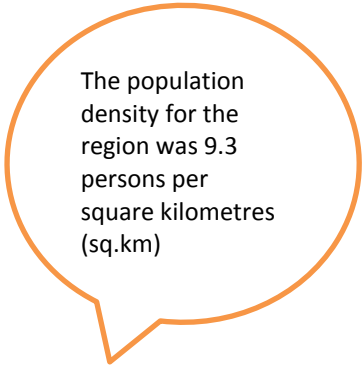

Population density is calculated as the average number of persons per square kilometre (sq.km). Thus, it shows the relationship between a given population and the size of the region in which they live. Population densities calculated for all constituencies in Khomas are provided in Table 2.1. Khomas had a population density of 9.3 persons per square kilometer.

At constituency level, Katutura Central was the most densely populated constituency with 12148.7 people per square kilometre, while Windhoek Rural was the least densely populated constituency with a density of 0.6 persons per square kilometre.

Table 2.1 Population density by area

Area	Population	Area in sq.km	population density
Khomas	342 141	36 948	9.3
Tobias Hainyeko	45 912	19	2480.7
Katutura Central	24 608	2	12148.7
Katutura East	18 501	3	7025.3
Khomasdal North	43 921	26	1692.5
Soweto	15 121	2	8030.7
Samora Machel	50 110	19	2607.7
Windhoek East	22 712	167	135.9
Windhoek Rural	22 254	36 469	0.6
Windhoek West	53 438	209	256.2
Moses //Garoeb	45 564	33	1397.9

The population density for the region was 9.3 persons per square kilometres (sq.km)

Table 2.2 shows the proportion of the population living in rural and urban areas, as well as in the ten (10) constituencies of Khomas region during the three census years.

The table shows that the proportion of the population living in urban areas was higher than in rural areas (95.2 % and 4.8% respectively). At constituency level, Windhoek West accommodated close to 16 percent of the total population or 53 438, down from 16.9 percent 10 years ago. Only 4.4 percent of the population (15 121) lived in the Soweto constituency in 2011, which also declined from 5.5 percent in 2001.

Table 2.2 Percentage share of the population within the census year and area

Area	Number		Percent	
	2001	2011	2001	2011
Khomas	250 262	342 141	100.0	100.0
Urban	233 529	325 858	93.3	95.2
Rural	16 733	16 283	6.7	4.8
Tobias Hainyeko	34 348	45 912	13.7	13.4
Katutura Central	21 243	24 608	8.5	7.2
Katutura East	17 745	18 501	7.1	5.4
Khomasdal North	27 950	43 921	11.2	12.8
Soweto	13 865	15 121	5.5	4.4
Samora Machel	29 382	50 110	11.7	14.6
Windhoek East	17 674	22 712	7.1	6.6
Windhoek Rural	20 212	22 254	8.1	6.5
Windhoek West	42 201	53 438	16.9	15.6
Moses //Garoeb	25 642	45 564	10.2	13.3

2.2 Population structure and composition

This section provides information on the composition of the population in terms of gender and age, which are important demographic parameters.

2.2.1 Age Structure

The age distribution of the population by broad age groups and area is presented in Table 2.3. Khomas had a relatively young population, with close to 27 percent of the whole population being under the age of 15 years. The share of young people below the age of 15 years in rural areas was close to 34 percent while that of urban areas was close to 27 percent. The proportion of elderly people (above the age of 60 years) in the rural area (7.6%) was more than double that in urban areas (3.4%).

Table 2.3 Population distribution by age group and area

Area	Population	Age group			
		0 - 4	5 - 14	15 - 59	60+
Khomas	342 141	10.8	16.4	69.2	3.6
Urban	325 858	10.7	16.2	69.7	3.4
Rural	16 283	12.9	20.8	58.7	7.6
Tobias Hainyeko	45 912	12.6	16.4	69.7	1.4
Katutura Central	24 608	10.9	20.0	64.8	4.3
Katutura East	18 501	11.5	19.9	63.5	5.1
Khomasdal North	43 921	10.7	18.2	68.2	2.9
Soweto	15 121	10.1	18.0	68.5	3.4
Samora Machel	50 110	11.6	16.7	70.1	1.6
Windhoek East	22 712	7.2	12.8	70.3	9.7
Windhoek Rural	22 254	11.8	18.5	61.7	8.0
Windhoek West	53 438	8.1	14.7	72.1	5.1
Moses \\Garoeb	45 564	12.4	13.3	73.2	1.2

2.2.2 Median age

Median age is used as an indicator to determine whether the population is young, intermediate or old. A country/region is considered young when it has a median age of less than 20 years, while countries with a median of 30 years and above are considered old. Populations with median ages between 20 and 29 are referred to as intermediate. Khomas region had a median age of 25 years, and was therefore intermediate. A median age of 25 years means that half of the population was less than 25 years old, and the other half was older than 25 years old.

Table 2.4 presents information on median age by sex, urban/rural areas as well as by constituency. The Khomas Region is considered to be an intermediate population at the urban, rural and constituency level.

The Khomas region's population has a median age of 25

Table 2.4 Median age by sex and area

Area	Median age		
	Total	Female	Male
Khomas	25	24	25
Urban	25	24	25
Rural	24	22	26
Tobias Hainyeko	25	23	26
Katutura Central	23	24	22
Katutura East	23	23	22
Khomasdal North	23	24	23
Soweto	23	23	23
Samora Machel	24	23	25
Windhoek East	32	32	32
Windhoek Rural	26	25	28
Windhoek West	25	25	25
Moses \\Garoeb	26	25	27

More than 50% of the region's population was female

2.2.3 Sex composition

The 2011 Census collected information on the sex of every person. Table 2.5 gives the population distribution by sex, urban/rural areas and constituencies. The results show that females made up slightly more than half of the region's population (50.4%). However, more males were found in rural areas, where the proportion of females was around 45.1 percent. At a constituency level, Katutura Central was characterized by a greater dominance of females compared to the regional average. The proportion of females in Katutura Central was 55.4 percent.

Table 2.5 Population distribution by sex and area

Area	Total	Female	Percent	Male	Percent
Khomas	342 141	172 469	50.4	169 672	49.6
Urban	325 858	165 128	50.7	160 730	49.3
Rural	16 283	7 341	45.1	8 942	54.9
Tobias Hainyeko	45 912	21 286	46.4	24 626	53.6
Katutura Central	24 608	13 625	55.4	10 983	44.6
Katutura East	18 501	10 103	54.6	8 398	45.4
Khomasdal North	43 921	23 532	53.6	20 389	46.4
Soweto	15 121	8 202	54.2	6 919	45.8
Samora Machel	50 110	25 520	50.9	24 590	49.1
Windhoek East	22 712	11 342	49.9	11 370	50.1
Windhoek Rural	22 254	10 167	45.7	12 087	54.3
Windhoek West	53 438	27 796	52.0	25 642	48.0
Moses //Garob	45 564	20 896	45.9	24 668	54.1

2.2.4 Sex ratio

Sex ratio is another measure of sex composition and is the proportion of males per 100 females in a given population.

Table 2.6 provides the sex ratio by urban and rural areas as well as constituencies. The sex ratio for Khomas was 98, implying that on average, there were fewer males for every 100 females in this region. The sex ratio for urban areas declined from 101 in 2001 to 97 in 2011.

On average there were 98.4 men for every 100 women in the Khomas Region

Table 2.6 Sex ratio by Census year and area

Area	2001	2011
Khomas	102.5	98.4
Urban	100.9	97.3
Rural	126.4	121.8
Tobias Hainyeko	83.7	115.7
Katutura Central	85.2	80.6
Katutura East	90.1	83.1
Khomasdal North	126.8	86.6
Soweto	109.5	84.4
Samora Machel	88.4	96.4
Windhoek East	125.4	100.2
Windhoek Rural	97.7	118.9
Windhoek West	119.9	92.3
Moses //Garob	94.5	118.1

2.2.5 Age-sex pyramid

Age-sex pyramids provide important illustrations of the demographic characteristics of a population.

Figure 2.2 shows the population pyramid for Khomas by five-year age groups. The pyramid indicates a broad base and a very narrow apex with some bulk in the middle age groups. This indicates that the region had a relatively young population with more people in the middle age group and fewer in the older age groups. The shape is a typical reflection of a population with a high fertility rate and a low mortality rate. Furthermore, the pyramid shows that the share of females is larger than that of males for all age groups.

Figure 2.2 Population pyramid, Khomas region

Figure 2.3 presents the population pyramid for urban areas in five-year age groups. The pyramid is bulky in the middle and has a relatively narrow apex, indicating that urban areas have a large proportion of working-age people (between 15-44 years of age) and a much smaller proportion of elderly people.

Figure 2.3 Population pyramid, Khomas Urban

Figure 2.4 presents the population pyramid for rural areas in five-year age groups. The pyramid clearly depicts a broader base which means that rural areas had a young population.

The rural population pyramid depicts a broader base than the urban pyramid. Additionally, the rural population pyramid indicated a lower proportion of working age people compared to the urban population pyramid.

Figure 2.4 Population pyramid, Khomas Rural

CHAPTER 3: POPULATION CHARACTERISTICS (Faced up)

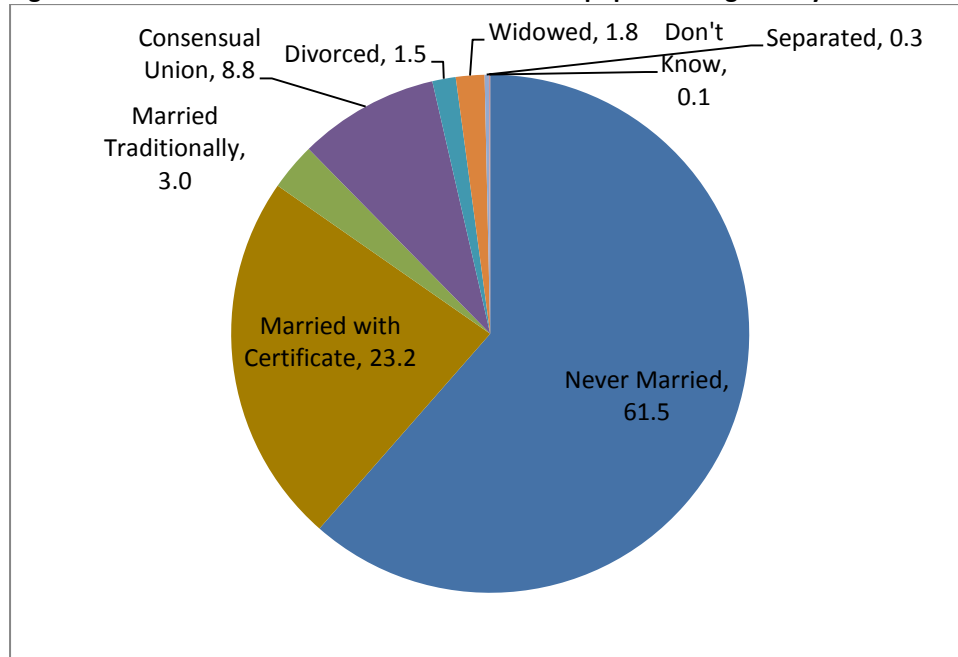

This chapter provides information on the demographic characteristics of the Khomas Region, and focuses on marital status, citizenship and status of birth registration.

3.1 Marital status

During the census, all people were asked to state their marital status in one of the following categories: never married; married with certificate; married traditionally; consensual union; divorced/separated or widowed. For international comparisons, the analysis focuses only on the population aged 15 years and above, although we acknowledge that there are cases of child marriage in Namibia.

Figure 3.1 shows that about 61.5 percent of the population aged 15 years or above in Khomas region had never been married, 23.2 percent were married with a certificate, and 3.0 percent were traditionally married. 8.8 percent of the population were living in consensual unions. The high number of people that were never married can be explained by the region's young population.

Figure 3.1 Percent distribution of marital status for population aged 15 years and above

3.2 Citizenship

The census asked all persons to state their country of citizenship, from which the number of Namibians and non-Namibians is reported.

Table 3.1 shows that the great majority of people enumerated in Khomas region (94.4%) were Namibians.

Table 3.1 Population distribution by citizenship and sex

Citizenship	Population					
	Total	Percent	Female	Percent	Male	Percent
Total	342 141	100.0	172 469	100.0	169 672	100.0
Namibians	322 286	94.2	163 216	94.6	159 070	93.8
Non-Namibians	19 844	5.8	9 246	5.4	10 598	6.2
Don't Know	11	0.0	7	0.0	4	0.0

Table 3.2 shows the distribution of non-Namibians by selected countries of origin. However, it only lists countries of origin from which citizens constitute a substantial share of the total non-Namibian population.

Angolan nationals represented the highest proportion of foreigners residing in Khomas Region (29.6%) followed by Zimbabwean nationals (14.7%) .

Table 3.2 Non-citizen's population by sex and country of origin

Citizenship	Population					
	Total	Percent	Female	Percent	Male	Percent
Total	19 844	100.0	9 246	100.0	10 598	100.0
Angola	5 865	29.6	2 585	28.0	3 280	30.9

Zimbabwe	2 926	14.7	1 310	14.2	1 616	15.2
Other SADC Countries	1 827	9.2	843	9.1	984	9.3
Other African Countries	2 354	11.9	1 120	12.1	1 234	11.6
European Countries	2 009	10.1	1 023	11.1	986	9.3
American countries	383	1.9	211	2.3	172	1.6
Asian And Oceanic Countries	997	5.0	371	4.0	626	5.9

3.3 Namibian Birth Registration

The Census collected information on whether or not respondents were in possession of a Namibian birth registration certificate. Birth certificates are needed to access social services, such as social grants and educational services.

Table 3.3 below shows that 96.7 percent of the Khomas Region's population possessed a Namibian birth certificate. At constituency level, the highest proportion of people with birth certificates was in Katutura East (98.8%) and Katutura Central (98.7%) while the lowest constituency was Windhoek Rural with 93.3 percent of people with birth certificates.

Table 3.3 Namibian birth certificate status by area

Area	Total	With birth certificate		Without birth certificate		Don't know	
		Number	Percent	Number	Percent	Number	Percent
Khomas	319 965	309 263	96.7	10 115	3.2	587	0.2
Urban	304 200	294 433	96.8	9 225	3.0	542	0.2
Rural	15 765	14 830	94.1	890	5.6	45	0.3
Tobias Hainyeko	44 840	43 337	96.6	1 402	3.1	101	0.2
Katutura Central	24 060	23 743	98.7	262	1.1	55	0.2
Katutura East	17 833	17 627	98.8	187	1.0	19	0.1
Khomasdal North	41 655	40 648	97.6	949	2.3	58	0.1
Soweto	14 653	14 439	98.5	200	1.4	14	0.1
Samora Machel	49 030	48 215	98.3	735	1.5	80	0.2
Windhoek East	17 816	16 033	90.0	1 749	9.8	34	0.2
Windhoek Rural	20 429	19 053	93.3	1 325	6.5	51	0.2
Windhoek West	44 996	42 785	95.1	2 151	4.8	60	0.1
Moses //Garob	44 653	43 383	97.2	1 155	2.6	115	0.3

About 96.7 percent of the population has acquired birth certificates

CHAPTER 4: POPULATION TRENDS (Face up)

This chapter analyses population trends, including changes in population growth, fertility patterns and household deaths.

The annual population growth rate between 2001 and 2011 was 3.1 percent

4.1 Population growth

The population of Khomas Region grew steadily between the 2001 and 2011 Censuses. Table 4.1 provides data on population increase and annual growth rates between 2001 and 2011.

The annual growth rate for Khomas region between 2001 and 2011 was 3.1 percent. The annual population growth rate for urban areas was higher, at 3.3 percent. However, there was a negative growth of 0.3 percent in rural areas. At constituency level, Moses //Garoeb recorded the highest growth rate (5.7%) compared to other constituencies.

Table 4.1 Population change and annual growth rate for 2001-2011 by area

Area	Population		Population increase (2011-2001)	Annual growth rate (2001-2011)
	2001	2011		
Khomas	250 262	342 141	91 879	3.1
Urban	233 529	325 858	92 329	3.3
Rural	16 733	16 283	-450	-0.3
Tobias Hainyeko	34 348	45 912	11 564	2.9
Katutura Central	21 243	24 608	3 365	1.5
Katutura East	17 745	18 501	756	0.4
Khomasdal North	27 950	43 921	15 971	4.5
Soweto	13 865	15 121	1 256	0.9
Samora Machel	29 382	50 110	20 728	5.3
Windhoek East	17 674	22 712	5 038	2.5
Windhoek Rural	20 212	22 254	2 042	1.0
Windhoek West	42 201	53 438	11 237	2.4
Moses //Garoeb	25 642	45 564	19 922	5.7

4.2 Fertility

The census collected information on live births from all women aged 15 - 49 years. Generally indicators of fertility measure the frequency of child bearing in a given population. This section presents two indicators of fertility, namely: Crude Birth Rate (CBR) and age at first birth for women aged 15 – 49 years, irrespective of their marital status or whether they have borne any children since their first child.

4.2.1 Crude Birth Rate

The Crude Birth Rate (CBR) is the number of live births per 1 000 of the total female and male population per year. 9 574 children were born during the 12-months prior to the 2011 census date, giving a reported or unadjusted CBR of 28 births per 1 000 people.

Table 4.2 indicates that the CBR was higher in urban areas (28.1 births) compared to rural areas (26.2). At constituency level, Tobias Hainyeko had the highest CBR, at 34.3 births per 1 000 people, while Windhoek East had the lowest CBR with 16.2 births per 1 000 people.

Table 4.2 Crude Birth Rates by area

Area	Population	Births in the last 12 months	CBR
Khomas	342 141	9 574	28.0
Urban	325 858	9 148	28.1
Rural	16 283	426	26.2
Tobias Hainyeko	45 912	1 575	34.3
Katutura Central	24 608	673	27.3
Katutura East	18 501	478	25.8
Khomasdal North	43 921	1 201	27.3
Soweto	15 121	412	27.2
Samora Machel	50 110	1 708	34.1
Windhoek East	22 712	369	16.2
Windhoek Rural	22 254	563	25.3
Windhoek West	53 438	1 052	19.7
Moses //Garob	45 564	1 543	33.9

Unadjusted crude birth rate was estimated at 28 births per 1,000 people

4.2.4 Age at First Birth

Age at first birth influences the total number of births that a woman might have in her life. This, in turn, has an impact on the size, composition and future growth of the population.

Table 4.3 shows that the average age of mothers at first birth in Khomas region was close to 22 years. In rural areas, the average age at first birth was slightly lower than the regional average, at 21 years. At constituency level, mothers in most constituencies gave birth for the first time at the age of 21 years, with the exception of those in Windhoek East and Windhoek West, who on average delayed pregnancy until after 23 years of age.

Table 4.3 Average age of mother at first birth by area

Area	Average age at first birth
Khomas	22.0
Urban	22.0
Rural	21.0
Tobias Hainyeko	21.0
Katutura Central	21.0
Katutura East	21.2
Khomasdal North	21.9
Soweto	21.8
Samora Machel	21.6
Windhoek East	25.2
Windhoek Rural	21.9
Windhoek West	23.3
Moses //Garob	21.4

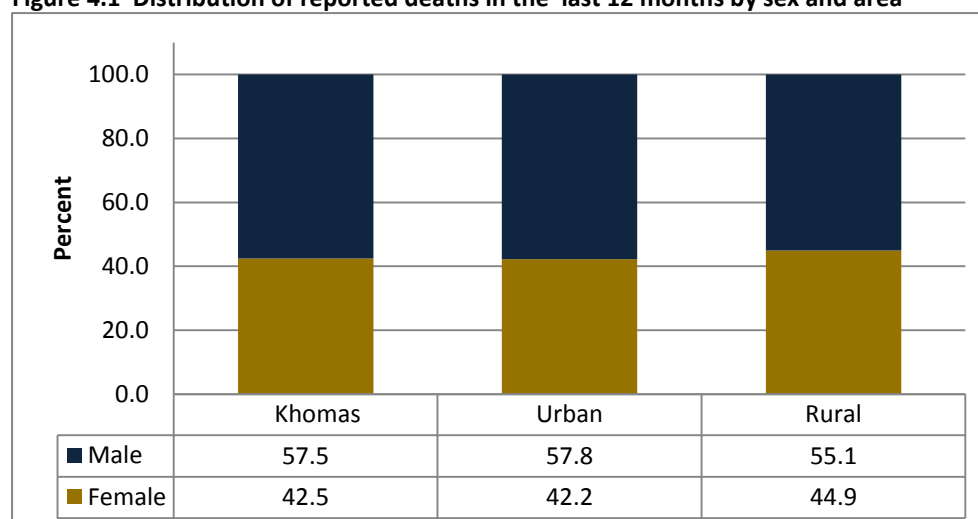

4.3 Deaths in the household

Information on deaths in the last 12 months (September 2010 to August 2011) was collected from all households during the Census. If any death occurred in a household, respondents were asked to state whether the death had been registered. Usually, mortality indicators are based on data from civil registration, but in Namibia this coverage is incomplete. It must also be acknowledged that information from surveys and censuses may be under-reported, which can lead to underestimations of the level of mortality.

4.2 Reported Deaths

Figure 4.1 presents the distribution of the reported deaths in the last 12 months by sex and urban/rural areas. A higher proportion of deaths was recorded for males (57.5%) compared to females (42.5%) in the region. The figure shows that a higher proportion of males than females died in both rural and urban areas.

Figure 4.1 Distribution of reported deaths in the last 12 months by sex and area

4.3.2 Crude Death Rate

Crude Death Rate (CDR) is defined as the number of deaths that occurred in a given calendar year per 1 000 people in the population.

Table 4.2 shows that a total of 2 360 deaths occurred during the 12 months prior to the Census in Khomas region. This gives a CDR of 6.9 deaths per 1 000 people. The results further show that more deaths were reported in rural (11.5 deaths per 1000 people) than in urban areas (6.7 per 1000 people). At the constituency level, the highest death rate was in Windhoek Rural (10.1) while the lowest rate was recorded in Windhoek West (4.6).

Table 4.4 Number of reported deaths in the last 12 months and CDR by area

Area	Population	Number of reported deaths	CDR
Khomas	342 141	2 360	6.9
Urban	325 858	2 173	6.7
Rural	16 283	187	11.5
Tobias Hainyeko	45 912	363	7.9
Katutura Central	24 608	210	8.5
Katutura East	18 501	169	9.1
Khomasdal North	43 921	256	5.8
Soweto	15 121	113	7.5
Samora Machel	50 110	292	5.8
Windhoek East	22 712	111	4.9
Windhoek Rural	22 254	224	10.1
Windhoek West	53 438	245	4.6
Moses //Garoeb	45 564	377	8.3

The crude death rate for the Khomas Region was 6.9 per 1 000 persons

4.3.3 Death Registration

Table 4.5 shows that 94.4 percent of all reported deaths in the 12 months before the 2011 Census were registered. Rates of registration were higher in urban (94.8%) than in rural areas (89.3%). At constituency level, Windhoek Rural had the lowest death registration rate with 89.3 percent of deaths registered, compared to other constituencies.

Table 4.5 Death registration status by area

Area	Number of reported deaths	Total registered deaths	Percent registered
Khomas	2 360	2 228	94.4
Urban	2 173	2 061	94.8
Rural	187	167	89.3

CHAPTER 5: SOCIO-ECONOMIC CHARACTERISTICS OF THE POPULATION

This chapter deals with the socio-economic characteristics of the Khomas Region's population. The information discussed herein is crucial for decision making, planning and monitoring of development programmes and policies. The sub-topics discussed include: Information Communication Technology (ICT), Early Childhood Development (ECD), Education and Literacy, Disability and the Labour Force.

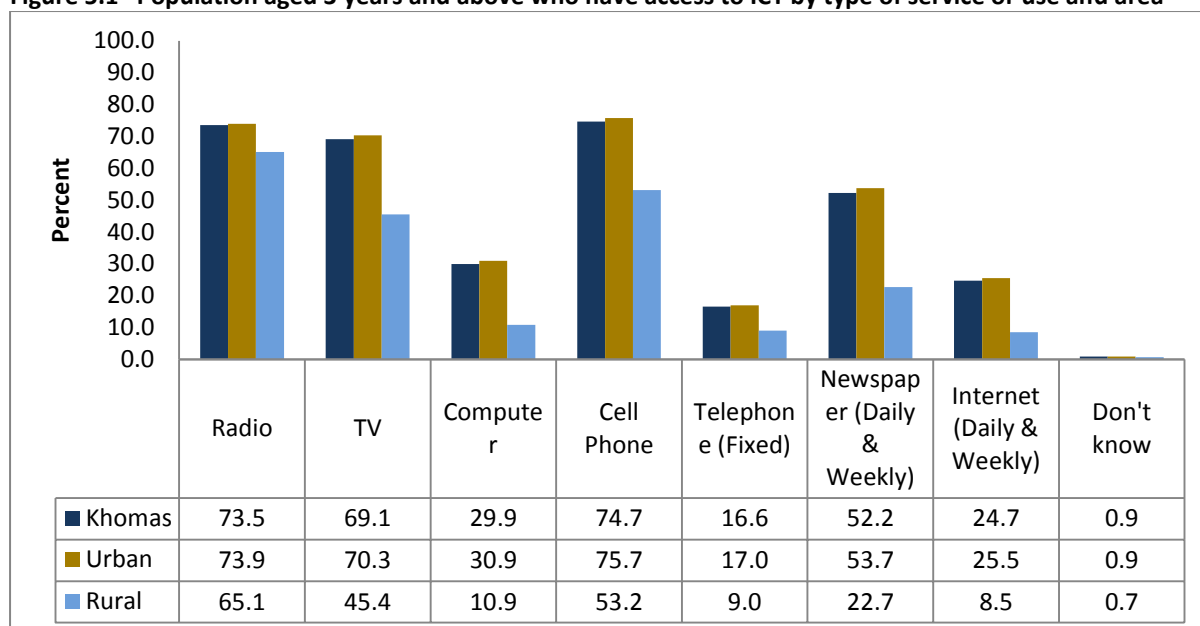

More than 67 percent of the population in Omaheke region has access to a radio

5.1 Information and Communication Technology (ICT)

Information on the usage of or access to ICT facilities was collected from people aged 3 years and above. This information includes access to information and communication technology such as radio, television, computer, cell phone, telephone (fixed line), newspaper (daily/weekly) and internet (daily/weekly).

Figure 5.1 shows that the majority (73.5%) of the population in Khomas had access to radio, with greater access in urban (73.9%) than in rural (65.1%) areas. Cell phones (74.7%) were more widespread across the region than fixed line telephones (16.6%). However, access to other modern information and communication technology such as computers and internet was fairly limited, particularly in rural areas.

Figure 5.1 Population aged 3 years and above who have access to ICT by type of service or use and area

5.2 Early Childhood Development (ECD)

Respondents were asked to state whether children aged 0 - 4 years attended any type of Early Childhood Development (ECD) programme such as Edu-care (daycare, crèche, kindergarten) and pre-primary school.

22.9% of children aged 0-4 years in the Khomas Region were attending Early Childhood Development programmes

Table 5.1 shows that a total of 36 681 children aged 0 - 4 years were counted in the Khomas region. Of these, about 22.9 percent attended ECD programmes. Access to ECD programmes in urban areas was slightly better than the regional average, with close to 24 percent of children attending ECD facilities in urban areas, compared to 8.7 percent in rural areas.

At constituency level, Windhoek East had the highest rate (53.7%) of ECD attendance amongst children aged 0 - 4 years, while Windhoek Rural had the lowest rate with only 12.9%.

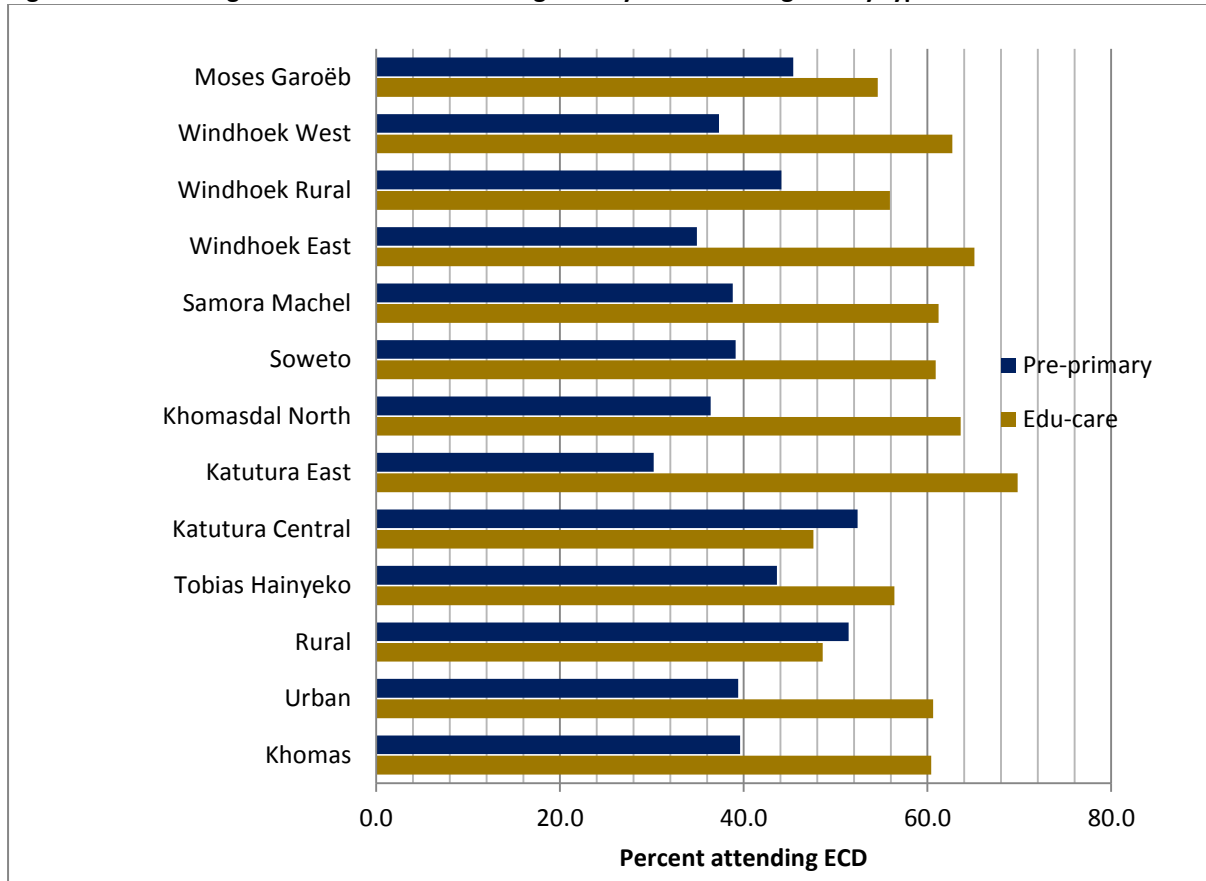

Table 5.1 Population aged 0 - 4 years attending ECD by sex and area

Figure 5.2 presents the population aged 0 - 4 years attending ECD programmes by type and area. Attendance in Edu-care programmes was higher (60.4%) than in pre-primary schools (39.6%).

Windhoek West, Windhoek East, Samora Machel, Khomasdal North and Katutura East showed the largest discrepancies between pre-primary school attendance vs. Edu-care attendance, with Katutura Central showing showing a stronger preference for pre-primary school programmes.

Figure 5.2 Percentage distribution of children aged 0-4 years attending ECD by type and area

5.3 Education and Literacy

Information on literacy and education is vital for many purposes, including for Government to articulate and monitor national development programmes and goals. During the Census, specific information on education and literacy was collected from all people aged 5 years and above.

5.3.1 Literacy

Literacy can be defined as the ability to read and write in any language, with understanding. During the Census, all people aged 5 years and above were asked whether they can read and write in any language with understanding. However, no test was administered to determine the level of literacy.

Table 5.2 provides information on literacy rates for the population aged 15 years and above. The table shows that the regional literacy rate was 97.4 percent, with no major difference between the rates for males and females.

97.4 percent of Khomas's population

The literacy rate in urban areas stood at 98 percent, while rural areas had a literacy rate of 84.8 percent. The table shows that literacy was highest in Windhoek East (99.7%) and lowest in Windhoek Rural (88.7%).

Table 5.2 Literate population aged 15 years and above by sex, and area

Table 5.3 indicates that the literacy rate for youth aged 15 - 24 years in Khomas was 98.5 percent, with a slightly higher proportion of females (98.9%) than males (98.2%) being literate. The rate was higher in urban areas (98.8%) than in rural areas (92.5%). There were slight differences in the literacy rate for young females and males in rural areas (93.7% and 91.5% respectively).

At constituency level, the highest literacy rate was in Windhoek East (99.7%) and the lowest was in Windhoek Rural (93.9%).

97.4 percent of persons aged between 15 -24 years

5.3.2 Formal Education

Formal education can be defined as full-time attendance at any regular educational institution - public or private - for systematic instruction.

The categories of formal education used during the Census were: pre-primary schools; primary schools; secondary or high schools; technical schools; agricultural institutions; teacher training colleges; polytechnics and universities.

Close to 29 percent of the population aged 6 years and above in rural areas have never been to school

5.3.2.1 School Attendance

Table 5.4 shows that out of the population aged 6 years and above in Khomas region, only 4.8 percent had never attended school. Rural area populations had a higher proportion of people that had never attended school (16%).

The table indicates that there was no difference in the proportion of people who attended adult education programmes in urban areas compared to rural areas (0.5% each).

Table 5.4 Percent distribution of school attendance for population aged 6 years and above by area

Area	Population	Never Attended	Pre-primary	Adult Education Programme	Attending School	Left School	Don't know
Khomas	296 238	4.8	1.0	0.5	29.2	62.0	2.4
Urban	282 528	4.3	1.0	0.5	29.6	62.3	2.4

5.3.2.2 Educational Attainment

Table 5.5 shows that about 39 percent of the region's population had completed their primary education and 31.2 percent had completed their secondary education before leaving school. Only 13.0 percent of Khomas region's population had completed any form of tertiary education.

About 39 percent of the total population aged 15 years and above had completed their Primary education before leaving school

Table 5.5 Distribution of the population aged 15 years and above who left school by highest level of educational attainment and sex

Educational Attainment	Population			Percent		
	Total	Female	Male	Total	Female	Male
Total	194 475	97 830	96 645	100.0	100.0	100.0

5.3.2.3 School Enrolment

Figure 5.3 illustrates school enrolment for the school-going population between the ages of 5 and 24 years. Enrolment rates were highest for ages 7 to 13 years (the usual age range for primary schooling), with enrolment rates between 85-90 percent. However, these rates dropped after the age of 16 years. More females than males were enrolled until the age of 16 years.

Close to 90 percent of the children aged between 8 and 13 years were enrolled in school

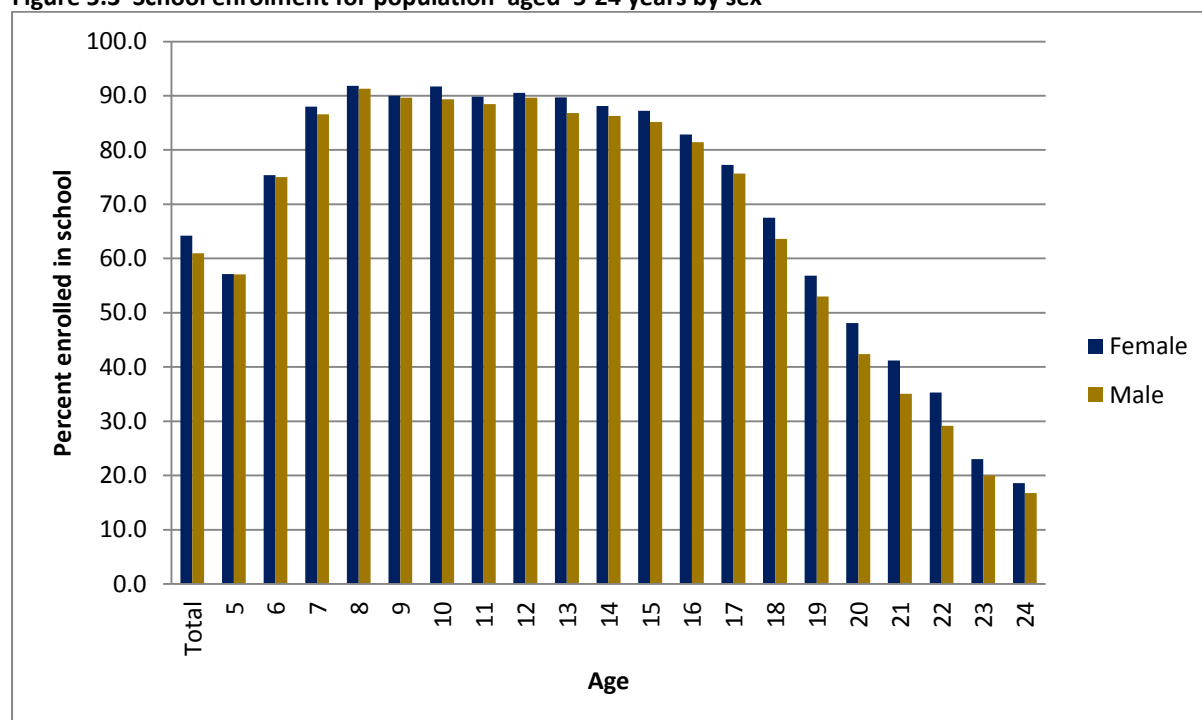

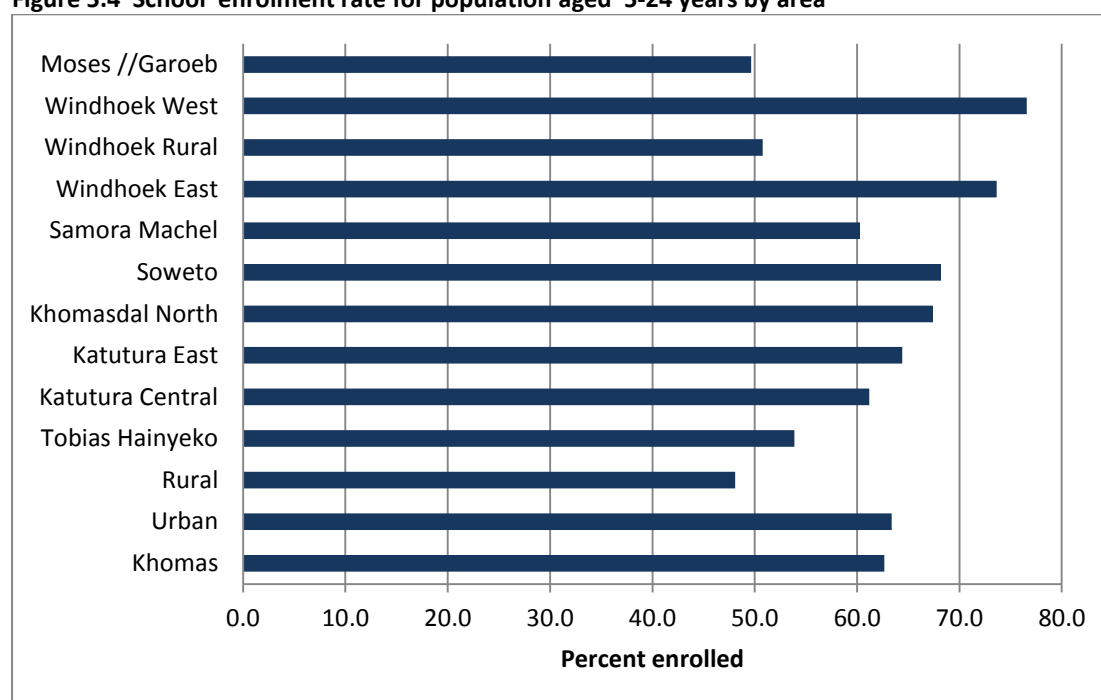

Figure 5.3 School enrolment for population aged 5-24 years by sex

Table 5.6 presents school enrolment rates for urban and rural areas. The table shows that the enrolment rates were higher in urban (63.4%) than rural areas (48.1%).

Table 5.6 School enrolments for population aged 5-24 years by area

24	8 522	8 278	244	1 508	1 502	6	17.7	18.1	2.5

Figure 5.4 illustrates the school enrolment rate for the population aged 5 to 24 years by area. The graph shows that school enrolment rates were highest in Windhoek West and Windhoek East, where it was over 70 percent. By contrast, the lowest enrolment rates were in Moses //Garoeb and Windhoek Rural where less than 50 percent of the population aged 5 to 24 years was enrolled at school.

Figure 5.4 School enrolment rate for population aged 5-24 years by area

Primary school enrolment rates are presented in Table 5.7. The results show that overall, the enrolment rate was 89.6 percent for children aged 7-13 years old in the region. The enrolment rate was higher in urban areas (90.3%) than in rural areas (78.3). The table also shows that slightly more girls in this age group were likely to enroll in rural schools than boys. At constituency level, the highest enrolment rates were recorded in Soweto (93.5%) and Windhoek West (93.4%), and the lowest in Windhoek Rural (79.8%).

89.6 percent of the children aged between 7-13 years were enrolled in primary school

5.4 Disability

Disability is defined as a long-term physical, psychological or mental condition that limits a person from carrying out everyday activities at home, work or school. It may be present from birth or developed during a person's lifetime. Information on disability assists government in planning infrastructure, education systems and community awareness programmes amongst others.

During the Census, all persons in private households and institutions were asked about the types of long-term/permanent disabilities or limitations they have. Ten types of disability were identified for this purpose: blindness; visual impairment; deafness; hearing difficulties; muteness/dumbness; speech impairment; physical impairment of lower and upper limbs; mental disability; albinism and autism.

Table 5.8 indicates that 3.2 percent of Khomas region's total population were living with disabilities. The proportion of people living with disabilities was higher in rural (4.6%) than in urban areas (3.1%). Constituency figures show that Soweto had the highest proportion of disabled people (5.6%), while Windhoek West had the lowest (2.2%).

Table 5.9 shows that visual and physical (lower limb) impairments were the most common types of disabilities, affecting 26.1 and 23.7 percent of the entire disabled population respectively. These were followed by mental disabilities (10.8%) and physical (upper limb) disabilities (9%).

Table 5.10 indicates that in urban areas, the highest proportion of people with disabilities were those with visual (26.1%) and physical impairments (lower limb) (23.7%). Similarly, visual (29.0%) and physical impairment (lower limb) (21.5%) were observed in rural areas as the most common types of disabilities. In both rural and urban settings, albinism and autism formed the smallest proportion of the population living with disabilities, with each affecting about 1 percent of the population.

Note: *The total is the number of persons with disability. This is not the total in the column as some persons had multiple disabilities

Table 5.11 shows that in Khomas region, about 30 percent of people living with disabilities had difficulty engaging in any learning and/or economic activity. There were no significant differences between males and females in this respect. However, a higher proportion of people with difficulties in engaging in any learning and/or economic activity were observed in rural (47.7%) than urban (29.1%) settings. The Windhoek Rural constituency had the highest proportion of people living with disabilities who faced challenges engaging in any economic activity.

5.5 Orphanhood

Orphanhood is the condition of being less than 18 years of age, and with one or both parents being deceased. Information on orphans was collected from all members of the household.

Table 5.13 shows that over 9 percent of the population aged 18 years and below in Khomas region had lost one parent, while 1.8 percent had lost both parents. Cases of orphanhood were more prevalent in urban than in rural areas. The proportion of this population with a single parent in urban areas was 9.3 percent, which is relatively high compared to 8.5 percent in rural areas. At constituency level, the highest rate of orphanhood was in Katutura East with 12.2 percent having one deceased parent.

9.3% of all children aged less than 18 years had lost one parent

5.6 Economic Activity

During the census enumeration, all people aged 8 years and above were asked about their economic activity within the seven days prior to the census reference night. The analysis presented below, however, only focuses on the population aged 15 years and above. Unlike the labour force survey which gives detailed information on specific activities, the census only provides an overview of employment and economic activity.

The diagram in Figure 5.5 illustrates the composition and definition of the economically active and inactive populations. Economically inactive people are students, homemakers and income recipients, while the economically active population is divided into unemployed and employed people. The diagram shows that 73.6 percent of the population aged 15 years and above was economically active, 20.7 was economically inactive, and information for another 5.7 percent of the population was not available.

73.6% of the population aged 15 years and above were economically active

Figure 5.5 Diagram of the population aged 15 years and above by activity status, Khomas

5.6.1 Economically Active Population

Table 5.14 shows that 70 percent of the economically active population aged 15 years and above was employed while 30 percent was unemployed. There were slight differences between urban and rural areas whereby 76 percent of the economically active population in rural areas was employed, compared to 69.7 percent of the economically active population in urban areas.

5.6.2 Labour Force Participation Rate

The labour force participation rate is the proportion of economically active people in a given population group. This is calculated as the number of economically active people divided by the total population.

Table 5.15 indicates that the labour force participation rate for the Khomas region was 73.6 percent. The rate was higher for males (77.1%) than for females (70.1%). The rate of labour force participation was higher in rural areas (75.5%) compared to urban areas (73.5%).

At constituency level, the labour force participation rates were highest in Tobias Hainyeko (82.1%) and Moses //Garoseb (82.4%) and lowest in Windhoek West constituency (61.1%). The labour force participation rate for females was lower than that of males in all constituencies.

Table 5.15 Labour Force Participation rate for population aged 15 years and above by sex and area

5.6.3 Population and Main Occupation

Table 5.16 shows that elementary occupations made up the largest occupation group (17.2%), followed by craft and related trades workers (15.6%). More males than females were found in these two occupation groups. Craft and related trade workers were dominated by men (24.5%) compared to 4.3 percent for women in the same occupation group. On the other hand, more women worked as professionals, technicians and associate professionals, clerks, service workers and elementary occupation workers than men.

Elementary occupation made up the largest occupation group with 17.2%

5.6.4 Employment by Industry

Table 5.17 shows the employed population by main industry and sex in the Khomas Region. The results show that 'Administrative and Support Service activities' employed the largest proportion of the working population, with a rate of 12.8 percent, followed by Construction with a rate of 11.1 percent.

Education, Financial Insurance activities and Accommodation and food serving activities were clearly the domain of women, while men were predominantly employed in Mining, Construction and the Transport businesses.

5.6.5 Employment by Educational Attainment

Table 5.18 shows that about 6 percent of the employed population in the region had no formal education. Of the employed population of males, 7.5% had no formal education. The table further shows that over to 30 percent of employed people had completed their primary education, while only 18.7 percent had completed their tertiary education. On average, women were better educated than men. About 34 percent of employed women had completed their secondary education and 21.4 percent had completed their tertiary education, compared to 28.8 percent and 16.6 percent of the employed men respectively.

Table 5.18 Educational attainment of employed population aged 15 years and above by sex

5.6.7 Unemployment

The unemployment rate is the proportion of the unemployed population in the labour force for a given population group (i.e. the number of unemployed people in the labour force, divided by the population of the labour force in the same population group).

Figure 5.6 illustrates the distribution of the unemployed population in terms of their level of educational attainment. The results show that about 9.0 percent of the unemployed population had no formal education, 16.9 percent had not completed their primary education, and 3.3 percent had completed their tertiary education.

Figure 5.6 Percen distribution of unemployed population aged 15 years and above by educational attainment

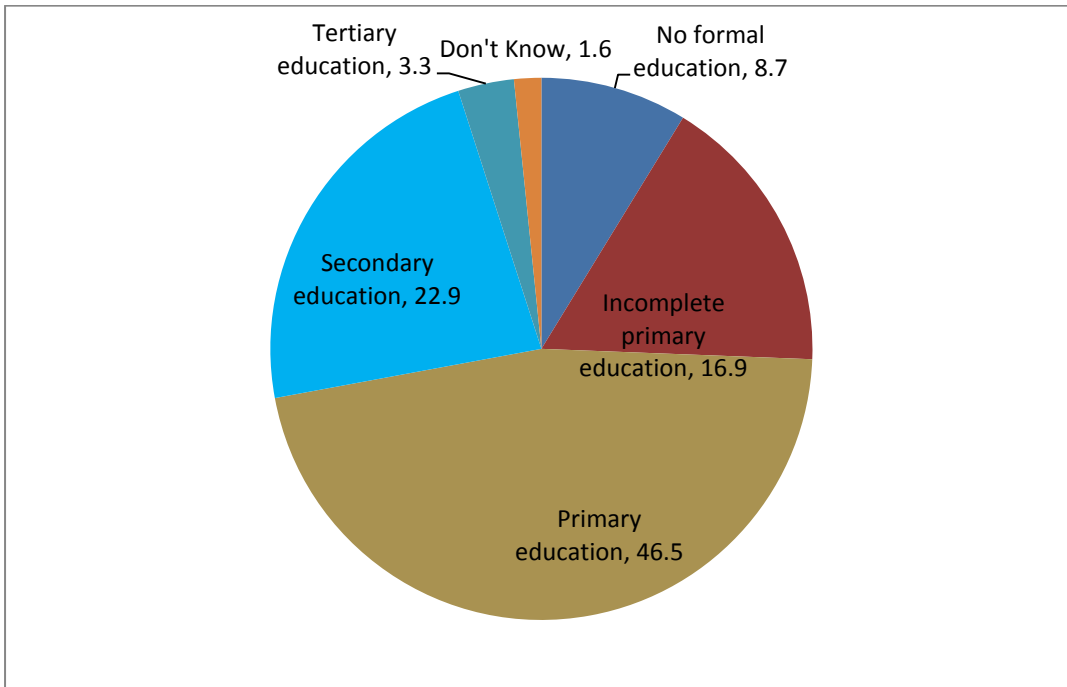

Table 5.20 shows that 21.3 percent of the unemployed population was actively looking for work. The proportion of females looking for work was higher than that of males (25.0% and 17.9% respectively). The percentage of job seekers in urban areas was higher than that in rural areas –(21.5% and 17.2% respectively). There were more females looking for work than males in most of the constituencies. The highest proportion of persons looking for jobs were in Moses Garoëb, Tobias Hainyeko, Katutura East and Samora Machel constituencies.

Table 5.20 Unemployment rate for population aged 15 years and above, actively looking for a job by sex and area

5.7 Economically Inactive Population

Table 5.21 provides information on the economically inactive population. Students constituted the largest share (54%), while those unable to work due to illness and disabilities had the lowest share with 3.8 percent. A greater proportion of women than men were homemakers (8.8%) and pensioners (7.7%) of all economically inactive women, while males formed the greater proportion of the economically active population who are students (56.1%).

CHAPTER 6: HOUSEHOLD CHARACTERISTICS (Face up)

This chapter presents information on household characteristics, particularly on household sizes, composition and income. Information on household assets, main languages spoken and agricultural activities is also outlined.

A household is defined as a group of people - related or unrelated - who live in the same dwelling unit and share or have common catering arrangements.

6.1 Household size

Table 6.1 shows that on average, a household in the Khomas Region consisted of 3.7 persons. This represents a decline from 4.2 persons in 2001. The average household size was slightly higher in urban (3.7 persons per household) than in rural areas (3.5). The average household size in Katutura East was the largest of the ten constituencies, at 4.9 persons per household.

Table 6.1 Average household size by census year and area

Area	2001	2011
Khomas	4.2	3.7
Urban	4.2	3.7
Rural	4.0	3.5
Tobias Hainyeko	5.2	3.7
Katutura Central	5.6	4.8

Windhoek East	3.8	2.9
Windhoek Rural	3.0	3.3
Windhoek West	3.8	3.6
Moses //Garoeb	3.9	3.3

Average Household size for the Khomas Region was 3.7 persons

6.2 Household composition

Table 6.2 presents the distribution of the household population by relationship to the head of the household.

Sons and daughters of the head of the household accounted for about 26 percent of household membership, while grandchildren (5.2%) and other relatives (24.7%) made up other significant proportions of household membership. Only 9.8 percent of household members were spouses.

Table 6.2 Household population by sex and relationship to the head of household

Relationship to the head	Population			Percent		
	Total	Female	Male	Total	Female	Male
Households population	334 120	169 642	164 478	100	50.8	49.2

Don't Know	270	131	139	0.1	48.5	51.5

6.2.2 Sex of Head of Households

Table 6.3 shows that most households (61.2%) in Khomas were headed by males. This trend was observed at urban/rural areas as well as across most constituencies – with the exception of Katutura Central, Katutura East and Soweto.

6.3 Percent distribution of household head by sex and area

Area	Households	Sex of head	
		Female	Male
Khomas	89 438	38.8	61.2
Urban	84 973	39.5	60.5

Windhoek West	13 837	35.8	64.2
Moses //Garob	13 804	34.4	65.6

6.2.2 Households Headed by Children and Orphans

Households headed by children and orphans require the attention of Government and other stakeholders. Table 6.4 provides information on households which were headed by children and orphans aged 18 years old or younger, and shows that at the regional level, 1.1 percent of all households in the Khomas region were headed by children, while 0.4 percent of households were headed by orphans.

There were higher proportions of households headed by children in rural areas (1.3%) than in urban areas (1.1%). At constituency level, Katutura East (2.2%) and Soweto (1.5%) had the highest number of households headed by orphans, while Khomasdal North had the lowest (0.26%).

Table 6.4 Percent Distribution of Child and Orphan headed households by area

Area	Total Households	Child Headed Household	Orphan Headed Household

Moses //Garob	13 804	0.9	0.3

6.3 Household Income

Households were asked to state their main source of income, which included: farming; business activities (non-farming); wages and salaries; old age pension; cash remittances; retirement fund; grants for orphans and people living with disabilities.

Table 6.5 shows that wages and salaries (72.7%) took up the greatest share as an income source in the Khomas Region, across urban and rural areas, while retirement funds and orphan grants made up the lowest share (0.8% and 0.2% respectively). In rural areas, farming (10.1%) and old age pensions (11.0%) also formed a significant share of main income; while in urban areas, non farming business activities also served as a major source of income (14.6%).

Table 6.5 Percentage distribution of households main source of income by area

6.4 Household assets

The ownership of assets is an important indicator of social welfare and living standards. Households that own certain assets have higher standards of living than those without. The Census collected data on a wide range of assets including cars, television sets, radios and mobile phones.

Table 6.6 presents information on communication assets. The results show that radios (74.1%) and mobile phones (74.9%) were the most commonly owned communication assets in the Khomas region. More urban households owned radios (74.4%) than rural households (68.8%). Only 15.3 percent of all households in the region had internet connectivity and the majority of them were in urban areas.

Table 6.6 Percentage of distribution of households owning selected communication assets by area

Area	Households	Radio	Television	Telephone (Fixed)	Telephone (Mobile)	Computer /Laptop	Home Internet Connectivity
Khomas	89 438	74.1	62.7	17.8	74.9	35.6	15.3
Urban	84 973	74.4	63.9	18.1	75.6	36.8	15.7

6.5 Language spoken at home

Information on the main language(s) spoken in the household was collected during the Census. The results on Table 6.7 show that Oshiwambo languages were the main languages spoken in households in the region (spoke in 40.7% of households), followed by Afrikaans (18.5%) and Nama/Damara (11.7%). Other European languages were not common in Khomas and only had a 0.5 percent representation within the population.

Table 6.7 Distribution of households by main language spoken

Main Language	Households	Percent
Total	89 438	100.0
San languages	172	0.2
Caprivi languages	1 289	1.4
Herero languages	8 608	9.6

Other European languages	1 497	1.7
Other African languages	432	0.5
Asian languages	130	0.1
Don't know	24	0.0

Note: Main language spoken at home refers to the language usually spoken or most often spoken by the members of the household.

6.5 Agricultural Activity

Agriculture is defined in the population Census as any activity directly related to the production or processing of crops, dairy products, poultry or livestock for commercial sale or as a principal means of personal subsistence. This is known as 'own-account' agriculture. Information was collected on the type of agricultural activities in which households were engaged during the 12 months prior to the Census. Where applicable, households could report more than one type of agricultural activity.

The results in Table 6.8 show that livestock farming was the most common agricultural activity in the Khomas region and was reported in 7.9 percent of households, while the least common was poultry (1.5%). Overall, livestock farming dominated in all constituencies of the region. At constituency level, Windhoek Rural had the most households engaged in livestock farming (16.5%).

Table 6.8 Percent distribution of households engaged in own agricultural activity by area

Area	Households	Livestock	Crop	Poultry	Others

CHAPTER 7: HOUSING CHARACTERISTICS

This chapter analyses the characteristics of housing, including all structures used as dwelling units. Aspects considered are the type of housing, type of tenure, materials used for building, housing utilities, sources of energy, water supply and sanitation.

7.1 Type of housing

The Census specified nine types of housing units: detached house; semi-detached/townhouse; apartment/ flat; guest flat; part commercial/industrial; mobile home (caravan, tent); single quarters; traditional dwelling and improvised housing unit (shack).

Table 7.1 indicates that detached houses were the most common types of dwelling units, accounting for 42.9 percent of households in the Khomas region. The table also shows that detached houses were more common in rural (61.3%) than in urban (41.9%) areas. 31.2 percent of the households in urban areas lived in improvised housing units/shacks.

30.6% of households reside in improvised

Table 7.1 Percent distribution of households by type of housing unit and area

Area	Households	Detached House	Semi-Detached House	Apartment /Flat	Guest Flat	Traditional Dwelling	Improved Housing Unit (Shack)	Other Housing unit
Khomas	89 438	42.9	13.0	8.7	1.6	0.3	30.6	1.3
Urban	84 973	41.9	13.2	9.0	1.7	0.2	31.2	1.2

Moses //Garob	13 804	22.4	12.1	1.6	0.2	0.1	62.0	1.3

7.2 Type of Tenure

Tenure refers to the conditions which govern the rights of individuals to occupy dwelling units. The most frequent forms are tenancy (in which rent is paid to a landlord) and owner occupancy which can be subdivided into owner-occupier or mortgaged. In the case of tenancy, the landlord may be a private individual, non-profit organization such as a housing association, or a government body that provides public housing.

Table 7.2 shows that most housing units (33.2%) in the region were owned and occupied by households without a mortgage. These were more common in rural (34.8%) than urban areas (39.8%). Housing units occupied by owners with mortgages were mainly found in urban areas (26.3%) and less so in rural areas (6.6%).

Table 7.2 Percent distribution of households by tenure status and area

Area	Households	Owner Occupied With Mortgage	Owner Occupied Without Mortgage	Rented (Government)	Rented (Local Authority)	Rented (Parastatal)	Rented (Private Firm)	Rented (Individual)	Occupied Rent Free	Others

Note: - means not applicable

7.3 Average number of people per room

The Census collected information on the number of sleeping rooms per household. The average number of persons per sleeping room (or room occupancy) can be used as an indicator of crowding.

Table 7.3 shows that on average, the number of persons per sleeping room in Khomas was 1.6. This suggests that most households are not overcrowded. There were no major differences between room occupancy in urban versus rural areas as well as between constituencies in this respect.

Table 7.3 Average number of persons per sleeping room by area

Area	Household Population	Number of sleeping rooms	Average persons per sleeping room
Khomas	334 120	207 458	1.6

Moses //Garob	45 562	26 740	1.7

7.4 Materials used for construction

This section presents information on the materials used to construct roofs, walls and floors. These are important indicators of the socio-economic conditions and welfare of households. Most of the materials used can be broadly divided between those that are harvested with labour from local resources (grass, stick, mud and dung, etc.) and those that are purchased with cash (cement bricks or blocks and corrugated iron).

Table 7.4 shows that 57.9 percent of the households resided in dwellings with walls made from cement/bricks. About 60.8 percent of urban households used cement/bricks for outer walls, compared to 57.7 percent of rural households. Corrugated iron/zinc was the second most commonly used construction material in both urban (38.7%) and rural areas (29.8%).

At a constituency level, households with walls constructed from corrugated iron/zinc were predominantly found in Moses //Garob (78.7%), Tobias Hainyeko (78%) and Samora Machel (58.2%).

Table 7.4 Percent distribution of households by main material used for outer walls by area

38.3% of households resided in dwellings with walls made with Corrugated Iron/Zinc

Table 7.5 shows that corrugated iron sheets were the main material used for roofing, covering over 94.1 percent of households. This trend was observed at urban, rural and constituency levels.

Table 7.5 Percent distribution of households by main material used for the roof and area

With regard to materials used for the floor, Table 7.6 shows that most houses in rural areas had cement floors (64.7%), while in urban areas, most housing units used tiles for flooring (41.1%). At the constituency level, Tobias Hainyeko, Samora Machel and Moses //Garob constituencies predominantly had sand/earth flooring.

7.5 Sources of Energy

Data collected from private households on energy for cooking, lighting and heating can provide useful information on social conditions and development. This information is also valuable as a measure of Namibia's use of renewable energy (e.g. solar and wind power) and non-renewable (e.g. oil and coal) resources, as well as of the environmental consequences of using different kinds of energy.

Table 7.7 indicates that about 63.9 percent of households in Khomas region relied on electricity as the main source of energy for cooking, while about 13.6 percent used gas.

More than 50.0 percent of rural households relied on wood for cooking, compared to only 5.4 percent of households in urban areas. About 15 percent of households in urban areas used paraffin/kerosene for cooking. The majority of households in all constituencies (except Tobias Hainyeko, Windhoek Rural and Moses //Garob) used electricity from mains as the main source of energy for cooking.

Table 7.7 Percent distribution of households by main source of energy for cooking by area

Area	Households	Electricity from Mains	Electricity from Generator	Gas	Paraffin/Kerosene	Wood/Charcoal from Wood	Charcoal-coal	Others
Khomas	89 438	63.6	0.3	13.6	14.0	8.1	0.1	0.1

Moses //Garob	13 804	23.6	0.3	26.9	41.3	7.5	0.1	0.2

With respect to the sources of energy for lighting, the results on Table 7.8 show that the most common source of energy for lighting in Khomas region was electricity from the main grid, used by 67.8 percent of households. Around 68.5 percent of the households in urban areas used electricity from the main grid, while 22.3 percent of households in rural areas used candles for lighting. Solar energy was not widely used, but played a more important role in rural areas (4.5%) than in urban areas (0.5%).

At the constituency level, electricity from the main electricity grid for lighting dominated in most constituencies with the exception of Tobias Hainyeko (26.7%) and Moses // Garob (27.5%), as these constituencies mostly used candles (52.3% and 48.8% respectively) as the main source of energy for lighting .

22.3% of households use candles as their main source of lighting

Table 7.8 Percent distribution of households by main source of energy for lighting and area

7.6 Water Supply and Sanitation

Table 7.9 shows that 98.8 percent of the households in Khomas region had access to safe water. The results further show that about 99.3 percent of the households in urban areas had access to safe water. With regards to unsafe water, 7.6 percent of households in rural areas relied on boreholes with open tanks and unprotected wells as their main source of water for cooking/drinking.

At constituency level, it is observed that 5.5 percent of the households in Windhoek rural had access to unsafe water from boreholes with open tank and unprotected wells.

98.8 of households have access to safe water

Table 7.9 Percent distribution of households by main source of water for cooking/drinking and area

With respect to the type of main toilet facilities, the figures on Table 7.10 show that about 49 percent of the region's households had access to a flush toilet, while 20 percent of households had no toilet facilities. There are notable differences between urban and rural areas. In urban areas about 50 percent of the households used flush toilets while the rural percentage was only about 25 percent. At a constituency level, in Moses //Garob, 48.6 percent of households lacked toilet facilities.

7.1 Garbage and waste disposal

Table 7.11 shows that the most common means of disposing of garbage in Khomas region was regular waste collection (74.4%). In urban areas 77.6 percent of the households benefited from regular waste collection whilst 57.1 percent of households in rural areas burned their waste. At constituency level, regular waste collection was most common across all constituencies, with the exception of Windhoek Rural where burning of waste (41.8%) was the most common means of disposing of garbage/waste.

Table 7.11 Percent distribution of households by means of waste/garbage disposal and area

Annexure

Glossary of Census terms

The concepts and classifications used in the 2011 Population and Housing Census are defined below. These concepts and classifications are based on regional and International recommendation with adaptations to suit local conditions.

Geographic Concepts

Khomas region consisted of ten (10) constituencies, namely: Tobias Hainyeko; Katutura Central; Katutura East; Khomasdal North; Soweto; Samora Mache;, Windhoek East; Windhoek Rural; Windhoek West and Moses //Garob.

Locality

For the purpose of the Census, a locality is defined as a distinct population cluster, irrespective of size, in which people live and which has a name or locally recognized status.

Enumeration area

For the purpose of enumeration (census data collection/counting), the whole country was divided into small geographical areas of manageable sizes known as enumeration areas (EAs).

Dwelling unit

A dwelling unit is a unit of accommodation of a household that may be vacant or shared by more than one household.

Marital status

Is defined as the person's personal status in relation to the marriage laws or customs of the country

Live birth

A child born alive is one who cries after being born. Thus, a live birth is a birth which results in a child that shows any sign of life irrespective of the time or period within which these signs are manifested.

Early childhood development

This refers to children aged 0 - 4 years who were attending day-care, crèche, kindergarten and pre-primary school. The categories were as follows: Edu-care (daycare, crèche, kindergarten) and pre-primary school.

Literacy

This refers to the ability to read and write with understanding in any language. Those that could both read and write with understanding were classified as literate; and those who could only read but not write were classified as illiterate.

School attendance

This refers to full time attendance at any regular educational institution, public or private, for systematic instruction at any level of education.

Educational attainment

The highest standard, grade or years completed at the highest level of school, college or university attended.

Disability

This refers to a condition of loss of physical or mental function resulting in inability to perform daily activities. Disability is aggravated by physical, personal, and environmental barriers.

Occupation

This refers to the type of work, trade or profession performed by an individual during the Census reference period, irrespective of status in employment of the individual.

Industry

This refers to the main goods and/or services produced at the person's work place (if employed) or usual place of work (if on vacation, sick leave).

Employment status

This refers to the status of those employed during the reference period or those who were on sick/vacation leave and had a job to return to, in terms of either working/worked as employees, employers, own account workers, or unpaid family workers.

Household

A household consists of a person or a group of persons related or unrelated who lived together in the same homestead/compound but not necessarily in the same dwelling unit.

Head of household

The head of household is the person (of either sex) who is looked upon by the other members of the household as their leader or main decision-maker.

Children and orphan headed household

This refers to households headed by children/orphans aged 18 years and below. Orphans are children 18 years and below who during the time of the Census were orphaned by one or both parents.

Household assets

Ownership of assets is a good measure of the social well-fare and standard of living of households. Hence, households were also asked whether they owned certain assets, and the assets had to be in working condition. Assets included: car, motorbike, bicycle, radio, television, telephone (landline), telephone (mobile), computer/laptop, refrigerator/freezer, stove, microwave, etc.

Agricultural activities

This refers to activities such as the farming of crop, poultry, or livestock, agro processing and horticulture.

Housing unit

This refers to separate and independent living premises occupied by the household.

Tenure

This is the arrangement under which the household occupies all/or part of a housing unit. This looks at whether the housing unit was owner-occupied, rented or rent-free.

Number of sleeping rooms

These are all rooms used for sleeping purposes only, thus it excludes rooms such as study rooms, toilets, kitchens, passages etc. However if a room such as a garage was used for sleeping purposes it was considered a sleeping room.

Material used for outer-walls, floor and roof

This refers to the main material used for the construction of the household's housing unit. Materials may include cement blocks/bricks/stones, burnt/face bricks for outer-walls, or corrugated iron-sheets, brick tiles, concrete for roof, or sand/earth, cement, mud/clay for floor, etc.

Source of water for cooking and drinking

A measure of the well-being of Namibians is the proportion of households that have access to clean/potable water. This question referred to the main sources of water used by the households for cooking and drinking.

Source of energy for cooking, lighting and heating

This refers to the type of energy most often used for cooking, lighting and heating. The sources include electricity, gas, solar, wood, candle, charcoal, paraffin, etc.

Type of toilet facility

This information provides a measure of sanitation level of the household since these facilities are important for disease control and health improvement. This looked at whether the household used a private toilet connected to the main sewer, public toilet connected to the sewer, private toilet connected to septic tank, public toilet connected to septic, etc.

Garbage and refuse disposal

This information can be used in obtaining the hygiene level of the household since these facilities are important for disease control and health improvements.
